

VULNERABILITY ASSESSMENT REPORT

Executive Summary

Vulnerability Assessment

A passive security assessment was performed on the target website to identify observable security weaknesses.

Assessment focused on:

- HTTP/HTTPS security
- Security response headers
- Cookie security
- Redirect behavior
- Publicly exposed information

Overall: Several security controls were observed, along with areas that could be strengthened to improve the website's security posture.

Scope

Target: Castorama.fr

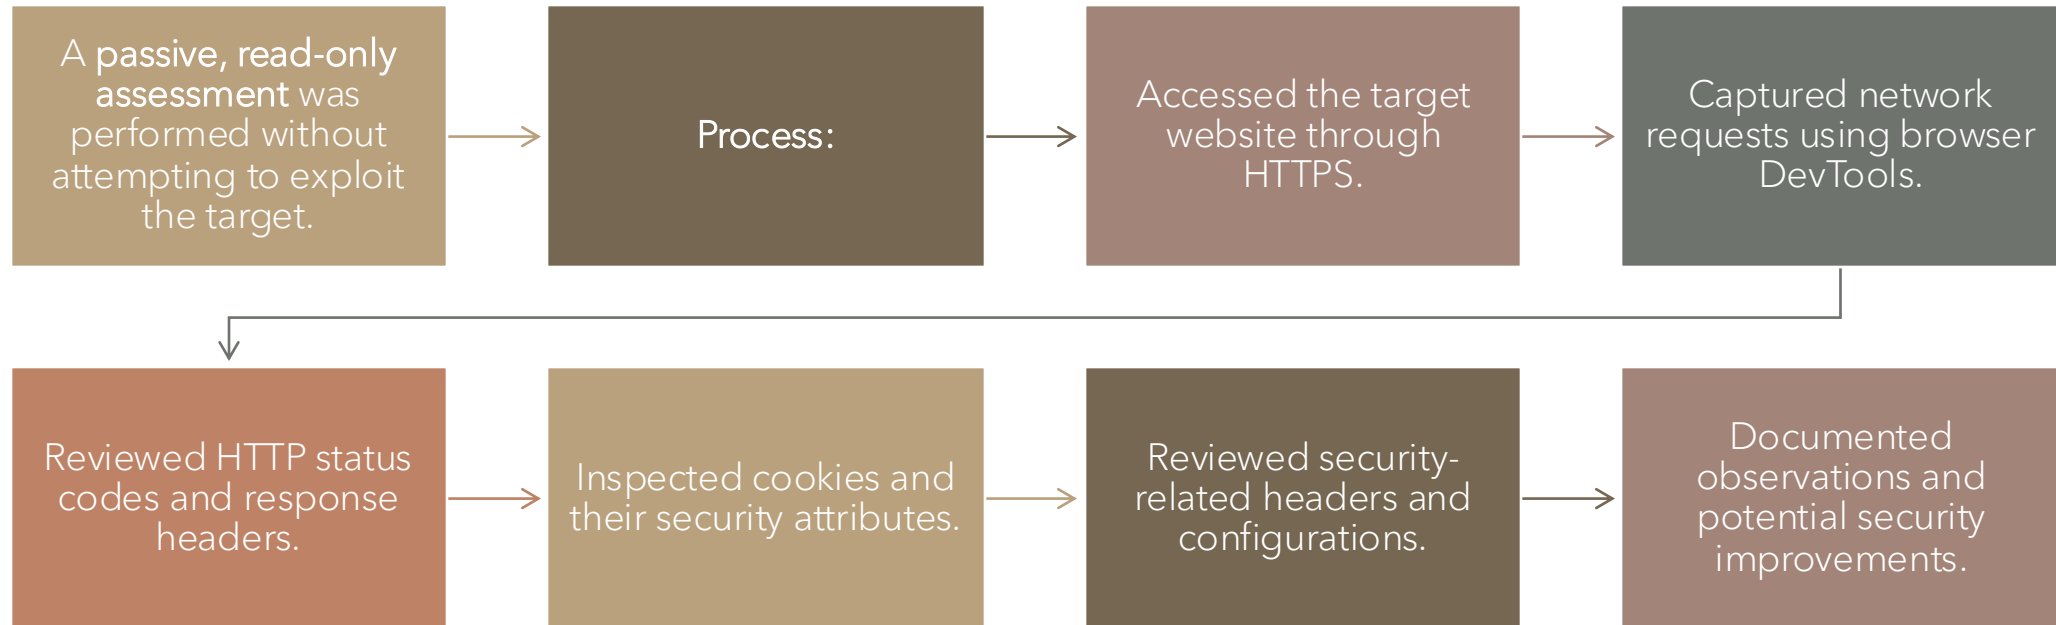

In Scope:

- Publicly accessible website
- HTTP/HTTPS responses
- Response headers
- Cookies
- Browser-visible security configurations and redirect behaviour

• **Out of Scope:**

- Authentication bypass
- Exploitation of vulnerabilities
- Denial-of-service testing
- Access to private/user data
- Destructive or intrusive testing

Methodology

Tools Used

Tools used are

- Browser DevTools – Network and cookie inspection
- cURL – HTTP response and header verification
- OpenSSL – TLS certificate inspection
- OWASP ZAP – Security assessment support
